

CREATIVE SOLUTIONS FOR SWITCH, SENSOR,
AND INTERFACE APPLICATIONS.

Interface *focus*

P Public Parking Systems and POS Terminals

Public POS and ticket dispensing manufacturers have remote outdoor equipment that is exposed to the harsh environment, prone to vandalism, and experience gorilla-forces when actuated. ITW's ActiveMetal products offer a solid metal construction with no moving parts, making them ideal for the application. Sealed construction protects intrusion from liquids and dust offering a long life solution.

Feedback: Halo illumination offers the user an identification of where to press and a change in color to identify an actuation occurred.

Remote Diagnostics: Real-time system status through ITW's 'Always Active' feature

The ActiveMetal switches use a solid-state technology that is always active and reading the surface of the switch. This allows the switch to provide information on the status of the switch back to a main control.

What this means for the equipment manufacturer is that down time can be reduced/eliminated through preventative maintenance versus responding to angry and dissatisfied equipment owners. The facility also has the equipment running 24/7 which is a revenue generation. Finally, the end-user (pedestrian, driver, etc.) doesn't have to experience any nuisances or delays while trying to operate the equipment.
